## HUBER NEWS

EDITION 5 | 2024

Georg Huber,  
CEO

### Dear Reader,

Below the ground in our cities lies a valuable, all too often untapped source of energy. A large amount of thermal energy is introduced into wastewater through a variety of household activities and industrial processes. Recovering this energy makes economic and ecological sense, not least because a significant proportion of it was generated using fossil fuels.

It is therefore very welcome that Markham District Energy (MDE) has announced the start of the world's largest wastewater-to-energy transfer project in Markham, Ontario, Canada. Read in this issue how the HUBER ThermWin system will generate 18MW of low-carbon thermal energy, reducing greenhouse gas emissions by 30,000 tonnes per year.

Yours sincerely,

Georg Huber

### 5 HUBER Belt Dryers BT for the utilization of more than 120,000 tons of sewage sludge

HUBER will supply a total of five Belt Dryers BT to the Belgian company Aquafin for the drying and thermal utilization of more than 120,000 tons of sewage sludge per year. The total order volume for HUBER SE amounts to more than 40 million euros.
