- > Steve Morris interview about 150th HUBER anniversary
- > HUBER are back at live events
- > Sludge thickening case study at Basildon WRC
- > Wastewater case study at Uttoxeter STW
- > HUBER Q-PRESS® sludge dewatering trial unit

Dear Reader

Welcome to our latest newsletter and an update on some of the things that have been happening at HUBER.

This is a special year for HUBER as we celebrate our [150th anniversary](#). The company has come a long way from its humble beginnings as a copper smithy in Germany to a leading global water and wastewater treatment business today, and you can read more about this journey and what lies ahead.

Like many others, we have really enjoyed participating in the [recent live events](#) which have taken place since the lifting of Covid restrictions. The return of the IFAT exhibition in Germany, after 4 years, was a great success as were the UK events including the Water Equipment Show, Utility Week Live and the Water Industry Awards. It was great to reconnect with many of you at these events. Attendance was high, suggesting that there's a real appetite for face to face contact again.

In this edition we are pleased to present a [selection of case studies](#) on recently completed sludge thickening projects using our HUBER S-DRUM and DrainBelt technologies.

We were delighted to be finalists in this year's [Water Industry Awards](#) in the category of Health and Safety Initiative of the Year - and to be able to showcase our innovative Safe Access Solutions, which have been developed in the UK with Mott Macdonald and Yorkshire Water.

We hope you enjoy reading about these and other stories, and wish you a safe and enjoyable summer.

Best Wishes
Steve Morris, Managing Director

[Steve Morris interview about the 150th HUBER anniversary](#)

Steve Morris takes a look at how the unique strengths of being a family led business have enabled HUBER to grow from a small copper smithy in Germany 150 years ago into a leading wastewater technology company with global presence.

HUBER are back at live events

Here is a summary of the recent live events where we have exhibited over the last couple of months. It has been great to see new and existing customers again at these events; the attendance has been high at all these events, suggesting that everyone is keen to get back to face-to-face contact again.

A HUBER Technology Sludge Thickening case study at Basildon WRC (Anglian Water)

Working with I.O.S., a delivery arm of Anglian Water, together we developed a solution utilising HUBER Rotary Screw Thickeners S-DRUM and investigated how these well proven sludge thickeners might replace existing centrifuges.

A HUBER Technology Wastewater Case Study at Uttoxeter STW for Severn Trent Water

HUBER Technology recently completed a project for Severn Trent Water at Uttoxeter STW, was part of the upgrade to the site to improve the sludge thickening. HUBER Technology were engaged on the project in 2019 with the project being installed in late 2021 and then commissioned later that year.

The HUBER Q-PRESS® sludge dewatering trial unit highlighting again significant cost savings

At a Wastewater treatment works in the North of England the Q-PRESS® trial rig is performing well and producing excellent preliminary results, outperforming a different technology that was previously trialed on the same site.
