## HUBER NEWS

EDITION 1 | 2024

Steve Morris,  
Managing Director

### Dear Reader

Welcome to our latest Newsletter and a round up of some of the things happening at HUBER.

We are continuing to see an increased demand for solutions to meet the government's Storm Overflows Discharge Reduction Plan, which sets out a mandatory £60 billion investment programme for improving all storm overflows performance.

With some 15,000 storm overflows in place in England alone, this will be no mean feat and the plan acknowledges that the upgrades will require significant increases in supply chain capacity, from skills to equipment.

### **HUBER - gearing up production capacity to meet increased demand**

HUBER is aware of the need to have the necessary resources and capabilities in place to help the water companies deliver on these demanding commitments. With over 1300 of our storm screens already in place at hundreds of sites across the country, we now have water companies and their Tier 1 delivery partners alike discussing the possibility of securing future production capacity at HUBER's factory in Germany. We are already in a strong position to meet this increased level of demand – HUBER has made significant investment in a major expansion of our factory in Bavaria. Last April we inaugurated a new €11 million state of the art production hall, with a production area of approx. 6,000 m<sup>2</sup>, and the detailed planning for the construction of a further assembly and logistics hall, which will also have an area of approx. 6,000 m<sup>2</sup>, is already underway. In terms of providing security of supply for our water sector customers, this ramping up of our production capability means we are uniquely well placed to meet your requirements in the timeframe required.

In other areas, 2023 saw the production of several containerised HUBER S-DISC sludge thickeners. The S-DISC has been widely adopted for several years, across many areas. The containerised S-DISC is our UK designed sludge thickening package. The DfMA package is built into a modified shipping container and provides a complete turnkey sludge thickening solution that includes the sludge pumps, polymer dosing system and controls.

Thank you for interest and support over the last year. We hope to see you at some of the many events we have planned this year and look forward to working with you in the year ahead.

Best Wishes  
Steve
