

## The HUBER ROTAMAT® family – proven technology for large projects

The machines of the HUBER ROTAMAT® family are still prime examples of efficiency and reliability. That is why they have rightly been in use at thousands of wastewater treatment plants worldwide for decades.

## HUBER NEWS

EDITION 2 | 2024

Georg Huber, CEO

### Dear Reader,

Permanent installations of machinery are the rule in wastewater treatment, whether for municipal or industrial plant operators. But temporary rental systems have a number of advantages. You are flexible when renting or cancelling, there is no long-term capital formation and the planning and approval process is generally simpler and faster.

However, there are also fields of application where there is no alternative to permanent installation. This is the case, for example, with our HUBER Pressure-Tight Door TT7. Read in this issue of our newsletter about the new access points to the bioreactors and aerobic digesters at the Powell River wastewater treatment plant in British Columbia, Canada.

I hope you enjoy reading it!

Yours sincerely,  
Georg Huber
