## HUBER NEWS

EDITION 1 | 2025

Steve Morris,  
Managing Director

### Dear Sir / Madam

Welcome to our latest Newsletter and a roundup of some of the things happening at HUBER.

Following Ofwat's announcement of the Final Determinations for 2025-30 for England and Wales, it is clear that AMP8 will be bigger than anything seen before. Tackling storm overflows and accelerating delivery of cleaner rivers is high on the agenda. HUBER have installed over 1400 CSO storm screens in the UK and offer a range of innovative storm water treatment solutions. We are busy working with a number of water companies, as strategies for the coming investment cycle are implemented.

The demand for packaged DfMA solutions continues to grow and building on the success of the containerised HUBER S-DISC sludge thickener, we have developed a larger capacity solution. Customers can now choose our S-DISC size 1 or 2 as a skid mounted package with or without a container. The DfMA package provides a complete turnkey sludge thickening solution that includes the sludge pumps, polymer dosing system and controls.

Our Hire business continues to grow, and we recognise the importance of having the right machine, at the right time, to meet the many and varying demands from site. Recent investment in our Hire fleet means we can offer a range of screens for different duties for rapid deployment, working through our regional teams across the country.

Whilst HUBER is well known for wastewater treatment, we are perhaps less well known for our range of Eel Regulation compliant screens for raw water intake. We are seeing more interest in this area as the demand grows for abstraction from the water course for a variety of applications, so please don't hesitate to contact us to find out more.

Thank you for your continued interest and support. We hope to see you at some of the many events we have planned in 2025 and look forward to working with you in the year ahead.

Best Wishes  
Steve
